

MANUFACTURING WHEN TO BRING IN GOLDFINCH

GoldFinch is Salesforce-native ERP & Accounting purpose-built for manufacturers who need production planning, cost accuracy, and financial alignment—without custom builds or bolt-ons. Bring in GoldFinch when...

MANUFACTURING LOGIC IS BEING CUSTOM-BUILT

BOMs, costing, or production planning live in spreadsheets or custom objects.

INVENTORY ACCURACY IMPACTS MARGINS

What's on hand directly affects production schedules, costs, and customer commitments.

FINANCE NEEDS REAL PRODUCTION VISIBILITY

Leadership asks where costs post, how WIP is tracked, or why margins don't reconcile.

COMPLIANCE OR TRACEABILITY MATTERS

Lot tracking, recalls, and audits aren't optional.

"ONE PLATFORM" NEEDS TO SURVIVE GO-LIVE

ERP and accounting can't live outside Salesforce without breaking the story.

GoldFinch is a true manufacturing ERP built natively on Salesforce. It unifies MRP, BOMs, work orders, inventory, and accounting in one platform—so production activity and financial impact stay aligned in real time. No middleware. No sync jobs. No reconciliation gaps.

Bring in GoldFinch when manufacturers need cost accuracy, production control, and financial alignment on one platform.
